

INSIGHT IN THE BLINK OF AN EYE

Tinting tools are an invaluable reference for any bodyshop, offering refinishers reliable information about different tints and finishes at a glance. Handy shading tables provide instant insight into the effect of adding or removing a tint.

These two tools are a one-stop information point for refinishers using waterborne **Cromax Basecoat** and **Cromax Pro Basecoat**. A dedicated poster for each basecoat range features a colour wheel for solid and effect colours, showing the colour in different tints. Additionally, both posters have specific shading tables, which show the direction the colour changes when adding or removing a tint. The tinting tools contain actual colour chips for completely accurate representation.
